Professional Summary

I'm Sajideen Hassan, an Associate Software Developer focused on building reliable, scalable, and user focused digital products. I work across modern web technologies, contributing to both frontend and backend development while solving technical challenges and improving application performance. With hands on experience in MERN, PERN, and Python, I collaborate closely with developers and project teams to turn requirements into practical solutions, write clean and maintainable code, and help deliver high quality software on time.

Technical Skills

- **Languages:** JavaScript, TypeScript, Python, SQL, C++
- **Frontend:** React.js, Next.js, Tailwind CSS
- **Backend & APIs:** Node.js, Express.js, FastAPI, REST APIs
- **Stacks:** MERN (MongoDB, Express, React, Node.js), PERN (PostgreSQL, Express, React, Node.js), Python
- **Databases:** MongoDB, PostgreSQL, MSSQL, Supabase
- **DevOps & Tools:** Git, CI/CD Pipelines, Docker, Vercel, Hostinger, Stripe API, n8n, Jira, Figma

EXPERIENCE

Associate Software Engineer

Nov 2025 - Present

TechTideCo.

- Developed, maintained, and optimized web application features across frontend and backend components, improving application reliability and user experience.
- Investigated and resolved website errors, UI issues, and dashboard performance bottlenecks to improve responsiveness and system stability.
- Collaborated with cross functional engineering teams to translate client requirements into technical tasks and practical software solutions.
- Assisted with sprint planning, task prioritization, and Agile development workflows to keep multiple workstreams aligned with project timelines.
- Tracked development progress, project milestones, and technical deliverables while maintaining clear documentation for internal stakeholders.
- Supported testing, debugging, and deployment activities to ensure features met functional and project requirements.

Associate Software Engineer Intern

Aug 2025 - Nov 2025

TechTideCo.

- Supported the development and integration of REST APIs across web application modules, ensuring reliable communication between frontend and backend services.
- Assisted developers in troubleshooting data handling issues, API integration problems, and application performance bottlenecks.
- Monitored assigned development tasks and maintained structured technical documentation to improve visibility across development workflows.
- Collaborated with team members during implementation and testing to identify issues early and support timely feature delivery.
- Assisted in maintaining project status updates and coordinating technical handoffs between development phases.

Management Lead

July 2025 - Aug 2025

ISPR Internship

- Coordinated communication and task management across multiple teams to ensure activities remained aligned with established deadlines.
- Tracked task progress, followed up on pending activities, and maintained clear communication between relevant stakeholders.
- Supported day to day operational planning and coordination to improve workflow efficiency and timely completion of assigned responsibilities.

Web Developer Intern

Jan 2025 - Mar 2025

IT Club

- Supported web development activities and conducted research on information systems and digital technologies.
- Assisted with organizing and documenting technical information to improve accessibility and consistency of project resources.
- Applied structured documentation and data organization practices to support efficient information processing and team workflows.

PROJECTS

AI Skin Disease Identifier

Developed an AI powered skin disease identification platform that analyzes uploaded skin images using a trained deep learning model with 89%+ prediction accuracy. The application provides possible condition information, recommended precautions, prevention guidance, and relevant dermatologist contact details to help users take informed next steps.

Tech Stack: Python, TensorFlow, Keras, OpenCV, Flask, React, Node.js, Express.js, MongoDB

Raynova Tech

Built the official Raynova Tech website with a personalized management dashboard for handling quotation requests submitted through the platform. Integrated a customer support chatbot to improve user engagement and automated communication. Later migrated the database from MongoDB to Turso while maintaining existing application functionality.

Tech Stack: React, Node.js, Express.js, MongoDB, Turso, Tailwind CSS, REST APIs, JWT

AI Furniture Support Chatbot

Developed an AI powered conversational support solution for a furniture business using ElevenLabs. The chatbot was designed around the client's requirements to handle customer inquiries, provide product related information, guide users through available options, and deliver a more natural and interactive support experience.

Tech Stack: ElevenLabs, React, Node.js, Express.js, JavaScript, REST APIs

Brotchun

Designed and developed a modern company website focused on visual storytelling and interactive user experiences. Implemented smooth scrolling, page transitions, scroll triggered animations, and interactive UI elements to create a polished motion-driven experience while maintaining responsive layouts across devices.

Tech Stack: MERN Stack, React, Node.js, Express.js, MongoDB, GSAP, Framer Motion, Tailwind CSS

TechTide Co. Platform

Worked on the official TechTide Co. website and internal developer dashboard, implementing feature updates, resolving application issues, and improving existing workflows. Enhanced the dashboard to support developer task assignment, tracking, and management while collaborating with the team to address technical and client specific requirements.

Tech Stack: React.js, Firebase, Firestore, JavaScript

n8n Workflow Marketplace

Built a full stack marketplace for users to upload, showcase, and sell n8n automation workflows. Added workflow documentation and visual diagrams so customers could understand each automation before purchasing. Integrated Stripe for secure payments and created authenticated dashboards where users can access their purchased workflows.

Tech Stack: React, Node.js, Express.js, MongoDB, Stripe API, JWT, n8n

Smart Inventory Management System

Developed an inventory management and billing system that automates stock tracking through barcode scanning. Integrated a Python based barcode processing solution that allows products to be added by scanning and automatically deducted from inventory as items are processed at the checkout counter, reducing manual entry and inventory errors.

Tech Stack: MERN Stack, React, Node.js, Express.js, MongoDB, Python, OpenCV, Barcode Scanner

EDUCATION

BS. Software Engineering

2021-2025

Lahore Garrison University

Major: Web Development

Minor: Mobile Application Development

ICS Physics

2019-2021

Garrison College For Boys

Division: 1st

Matriculation

2019-2021

Army Public School & Colleges System

Subject: Computer Science
